The Vortex Energiser (20cm height, 18cm greatest width) is a spiralling copper device. It contains highly energised water, which has been prepared using an innovative new process called implosion. Whilst this process is new to technology it is actually as ancient as the Universe. Implosion is one of the fundamental processes behind nature. The Austrian Viktor Schauberg, the father of implosion technology saw implosion as the life generating principle and explosion as the life degenerating principle (Coats, 1996).

Because of the special water it contains and its shape, the Vortex Energiser acts as a cosmic antenna and amplifier which takes its energy directly from the Quantum Sea of Energy (also called the Ether), a subtle form of energy which is all around us.

This means that no electrical power supply is required. Just placing the Vortex Energiser beside ordinary 'lifeless' water will cause it to become charged and healthy once again. Direct contact with water is not necessary as the energy is transferred by way of vibration. This process is similar to one tuning fork picking up the vibration of another tuning fork, even if the first one has not been struck. This is also called resonance.

The photographs below taken by Prof. David Schweitzer through a phase contrast darkfield microscope at 4000x magnification show the changes to the micro cluster structure of water as a result of being energised with the Vortex Energiser. The middle and right images clearly show the increased structure and more vibrant biophoton emissions. Biophotons are molecular light emissions, which, according to Prof. Fritz Popp, regulate cell growth and regulate cell regeneration. They also control all biochemical processes.

After his tests Prof. Schweitzer commented:

*"Now, as you can see on the images, it is beyond words! The beauty, colour and structure are unparalleled to anything I have ever seen. I personally cannot explain, how and why this transformation of the water clusters has been so dramatic after applying the Vortex Energiser. There are two main cluster structures that appear after letting the water run for 10 minutes through the Energiser field. It is the branch shape and some geometric shapes of a very unusual kind. It is apparent that these two shapes represent the female and male, respectively. I have never seen water samples which contains both these shapes before. This is very balanced water. I used the tilting of 1.12 degrees of the table, 4000X computer enhancement, polarizing filter, with 820 NM light source. Well, I guess, these are images, that talk for themselves!!!"*

Regarding David Schweitzer's tests, he attached the Vortex Energiser to the pipe just before the tap, through which he then let tap water run for 10 minutes. After 10 minutes he drew a sample of water from the tap, which produced the energised images.

In 2001 Shavante, (former genetic biologist Dr. Derek Hasdell) our friend and distributor in Japan carried out dark field phase contrast microscopy at the Olympus headquarters in Nagano, Japan. State-of-the-art imaging equipment was used at a magnification of x 1000. If you would like to view a slide show of the evolution of a drop of energised water as it evaporates and reveals its micro-structure and light phenomena please [click here](#).

Independent tests carried out by the Biofield Laboratory in Vienna have shown that the physical properties pH and conductivity of water change in a subtle way with energisation. In some tests the pH of acidic bidistilled water was raised towards the 'normal' region of pure water. These changes appear to be a direct result of the clustering of the molecules with energisation.

An aspect that requires further investigation is the transformation of dissolved minerals into highly charged colloidal particles. There are indications that this transformation is taking place, which might explain

why many people experience a reduction in the taste of chlorine and hardness after fitting a Vortex Energiser to their domestic water system. In terms of the toxicology of water this seems to suggest that, although chemicals are not actually eliminated, they might be transformed into a state in which they are less harmful to the human being. At any rate, drinking energised water strengthens the immune system and should make the body cope much better with the detrimental outside effects stemming from pollutants, chemicals and electromagnetic radiation.

Kinesiologically it has been shown that homeopathic and natural medicines are dramatically increased in their healing power by the Vortex Energiser.

Whereas ordinary lifeless tap water saps the energy field of organisms, tap water revived with the Vortex Energiser enhances and raises their overall energy field. This has been found to stimulate the organism's self healing ability and immune system.

So what are the effects on tap water when a Vortex Energiser is fitted to it?

Well, they are really quite varied. We've been selling the Vortex Energiser now since January 1998 and have had quite a bit of feed back. The obvious physical changes to tap water as reported by most of our customers are:

- the clarity of the water improves, some people can actually see a purply blue hue around the water, which is part of the emanations coming from the water.
- water regains a remarkable natural quality and taste. It becomes more palatable and less hard.
- the taste and smell of chlorine is much reduced or even eliminated.
- Lime scale deposits become soft and are eventually removed.
- bathing in energised water is a reviving experience leaving skin supple and soft.
- fresh food and cut flowers last longer.
- water virtually doesn't become stagnant and foul smelling.

The Vortex Energiser when attached to the domestic water inlet pipe, energises all the water in the house - instantly and constantly. There are no further maintenance requirements.

The applications of the Vortex Energiser seem to be endless. So many uses can be found in the house, garden, office and in industrial applications. We invite you to experiment with the Vortex Energiser for yourselves. Please also read the testimonials from our website library.

The following types of Vortex Energiser are available;

### Copper

The standard version is manufactured from copper and provides a general balanced energy.

### Silver

The silver version is manufactured from copper and silver plated. This strengthens the energy with the aura of this Energiser being approximately 1.5 times the copper. The silver energy is more of a female and nurturing energy.

### Gold

The gold version is manufactured from copper and gold plated. This strengthens the energy with the aura of this Energiser being approximately twice the copper. The gold energy is more of a male and healing energy.
